Andermatt BioVet – Committed to Bee Health

About us

Together for healthy bees

Since 2003, Andermatt BioVet AG has been passionately committed to improving the health of bees. Our goal is to develop solutions for the challenges of modern beekeeping and to support both conventional and organic beekeepers worldwide. In particular, we offer sustainable and effective products for Varroa control that benefit bee colonies.

Our dedicated team at our Swiss headquarters is always committed to the highest quality, precision

and innovation. We work hand in hand to create practical, environmentally friendly and scientifically sound solutions.

With Andermatt BioVet AG, organic beekeepers have a reliable partner at their side that relies on many years of experience and continuous innovation – for healthy bees, healthy food and a healthy future.

Urs Fanger
CEO

“Andermatt BioVet is proud to offer a comprehensive range of solutions for honey bee health. To promote healthy bee colonies, we provide natural feeding solutions that complement our approved veterinary medicinal products and effectively support our varroa control program. Our mission goes beyond providing products – we are creating a community committed to healthy bees and a sustainable environment.”

Production

Quality from Switzerland

At our modern, GMP certified production site in Grossdietwil in the Canton of Lucerne, we manufacture high-quality products such as Varroxal®, Thymovar®, Oxuvar® and Formivar® – Made in Switzerland.

Customer inquiries are received directly on-site and incorporated immediately into production planning, ensuring precise adaptation to our customers' needs.

Our goal is to consistently deliver high-quality products – sustainably produced, using innovative technologies and to the highest Swiss quality standards. Our philosophy is founded on quality, reliability and sustainability – for strong bee colonies and a healthy environment. Place your trust in Swiss expertise and the commitment of Andermatt BioVet AG!

Quality Management

Guaranteeing the highest standards

Quality control is a core aspect of our work and ensures that we only market products of the highest quality. It accompanies the entire manufacturing process – from the delivery of raw materials to the final inspection of finished products.

Our in-house laboratory, which is equipped with the latest equipment, carries out all the necessary tests and chemical analyses to ensure that the quality specifications of the regulatory authorities for medicinal products are met. As soon as the raw materials and components are delivered, they are checked to ensure that they meet the defined specifications.

Raw materials are only used in the production of Varroxal®, Thymovar®, Oxuvar® and Formivar® after receiving successful approval from our quality control department.

After production, additional samples of the finished product are taken and subjected to a final quality inspection. Only after this inspection is the product released for the national and international market. This process ensures that our products meet all quality standards required for pharmaceutical products.

Consulting

Expert knowledge for bee health

Our experienced team of consultants is here to support you with comprehensive expertise – whether by phone, email, at trade fairs in Switzerland and abroad, or directly at your location. Ensuring your satisfaction is our highest priority.

We participate in numerous beekeeping fairs and congresses around the world to keep up to date. We

collaborate closely with national and international research groups to keep our knowledge of current bee research up to date. We gladly share our expertise and practical experience at the apiary with our customers to provide the best possible solutions for the health of your bees.

Mark Kalmbach
Product Manager

“As a beekeeper and passionate breeder of the European dark bee in Switzerland, I deeply understand your concerns and I am always happy to provide expert advice. Healthy bee colonies are my top priority, because only healthy bees are able to collect nectar and produce high-quality honey during the foraging period.

In my opinion, a carefully designed treatment concept with approved active ingredients and the regular formation of nucleus are indispensable elements of successful beekeeping.”

Distribution

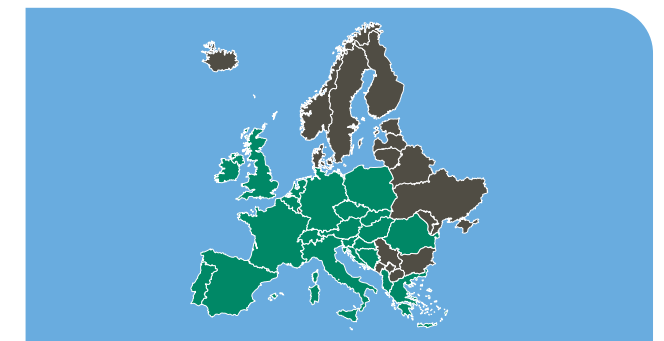

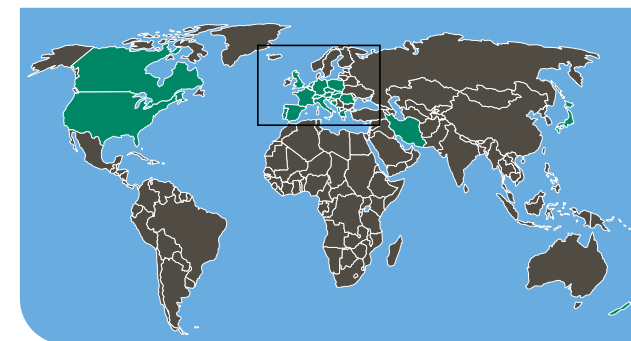

Global partner for bee health

Andermatt BioVet AG is your global partner for bee health. With a clear focus, we distribute our premium-quality products across numerous countries, including most of Europe, Canada, the USA, Japan and Oceania. This international presence allows us to respond to the specific needs of beekeepers in a wide range of regions.

Flexibility is one of our defining strengths. We adapt to the requirements of each market and offer

solutions that convince. Whether it is about entering new markets, meeting individual delivery conditions or reacting quickly to changes – Andermatt BioVet AG stands for dynamic and reliable distribution.

With our global presence and local expertise, we tackle the challenges of beekeeping across various regions with flexibility and a solution-driven approach.

Andermatt BioVet Ltd. manufactures high-quality products for bee health in Switzerland and distributes them to the countries marked in green across four continents.

Portfolio

A wide range of products for healthy bees

Our range includes a wide variety of products for healthy bee colonies, developed to meet the needs of beekeepers. From effective Varroa control products such as Thymovar®, Oxuvar®, Formivar® and Varroxal® to providing practical solutions for the care and protection of bee colonies. We offer everything needed for successful and sustainable beekeeping.

Our range is based on products with natural active ingredients and scientific research. The products

have been carefully developed to ensure maximum effectiveness while minimizing environmental impact. Whether for conventional or organic beekeeping. Our solutions stand for innovation, quality and sustainability.

With a focus on user-friendliness and versatility, we support beekeepers worldwide to maintain healthy and strong bee colonies.
